Abstract (en)

[origin: WO2004014770A1] The invention relates to a device for guiding a web (17, 22, 23, 24) in a processing machine, comprising a register device (16, 51) and at least one further guiding element (28, 30, 41, 41') subjecting the web to an offset or a change in direction. The register device (26, 51) and the further guide element (28, 30, 41, 41') are arranged such as to move on a common guide (08, 42, 46, 54), transverse to a direction of an incoming web (17, 22, 23, 24).
