Abstract (en)

[origin: WO2004009677A1] The invention relates to an immobilization layer for biosensors, produced from a polyorganosiloxane while adding reaction cross-linkers/reaction mediators on a supporting material. The polyorganosiloxane corresponds to the following general structure (I), wherein the following applies: E represents an epoxy-functional radical having 4 to 20 C atoms; Z represents a (photo)polymerizable radical having 8 to 40 C atoms; H represents a hydrophilic radical; R<1> represents a low alkyl group preferably having 1 to 4 C atoms; R<2> represents R<1> or H, and; m + n + o + p + r = 50 to 200 and is equal to L.
