Abstract (en)
[origin: WO2004011752A1] Locking apparatus (3) for an openable and closable glass element (1) in a glazing system;vvhich locking apparatus comprises a first and a second locking member (4) arranged at least on the opposite edges of the glass element, and a tensile stress transmitting member (5). The locking apparatus (3) is provided with a rotary control member (6) for controlling at least the first and the second locking member (4) simultaneously, and said control member is connected at least to the first locking member via the tensile stress transmitting member (5).
