Abstract (en)

[origin: WO2004013443A1] The inventive device comprises a counter mechanism which is provided with at least one drive element (1) arranged on a clutch shaft (2) which is cinematically connected to a mounting element, and at least one lever (4) which is movable between two positions and bears driven elements (3) actuated by one or several drive elements. for Disconnection means for power supply to an actuator is controlled by the counting mechanism. A manually operated means (12) makes it possible to put the lever (4) in the second position thereof, thereby reinitialising the counting. Said device is characterised in that it comprises means (10) for blocking the lever (4) in the first position thereof, said means being arranged in such a way that it is unblocked by the action of the manually operated means (12) which puts the lever (4) in the second position thereof.
