Abstract (en)
[origin: DE10233906A1] The fuel injector module, for direct fuel injection at an internal combustion motor, has a housing (1) for the actuator (2) and the injection valve. The actuator is linked to a compensation unit (6) to compensate for any longitudinal change in the housing through thermal expansion. A heat conductor (33) is between the compensation unit and the housing, as a sleeve around the compensation unit and in contact with both. The sleeve has longitudinal slits, forming curved bars (34).
