Abstract (en)

[origin: WO2004013556A1] The invention relates to a microstructured apparatus for heating a fluid, comprising an inner tube (1), or a body with an external surface and a heating system, an external tube (2), arranged concentrically around the above with an internal surface, connections (4) for the fluid and a microstructure (5) completely filling a volume between the inner and outer tube in a sealing manner with formation of at least one channel. The aim of the invention is to disclose a microstructured apparatus for heating fluids, characterised by a heating element of simple construction.
