Abstract (en)
[origin: WO2004017423A2] According to the invention, a plurality of cumulative current flows fulfilling a pre-determined selection criterion can be determined from detected cumulative current flows. At least one cumulative current flow fulfilling a pre-determined second selection criterion can be selected from the determined cumulative current flows, as a cumulative current flow representing a sensor signal. The sensor element to which a sensor signal is applied is determined from the selected cumulative current flow.
