Abstract (en)
[origin: EP1387227A1] The wrist watch comprises a casing (1) with a bracelet (7) attached. Around this there is a flexible element (5) formed by a plastic or metallic wire whose ends are fixed into a guide (2a,2b) inserted into the attached bracelet. The wrist watch comprises a casing (1) with a bracelet (7) attached. The casing (1) includes a lower edge around which is a support channel providing for the attachment of the base. Around this there is a flexible element (5) and a second edge, enabling the watch to be reversible. The supports for the casing allow the insertion of the rings forming part of the bracelet. The flexible element (5) is formed by a plastic or metallic wire whose ends are fixed into a guide (2a,2b) inserted into the attached bracelet. The flexible element forms a complete loop surrounding the casing of the watch.
