Abstract (en)
[origin: DE10233909A1] The arrangement has a down frequency converter (3), an amplifier (5), a demodulator (6) and a detection unit (8) with a high pass filter (10,11) with an input connected to the amplifier output to derive a reception field strength signal and a threshold comparator (15) connected to the high pass filter output and coupled to the demodulator's control input to output a value representing the modulation method of the radio signal.
