Abstract (en)
[origin: EP1525903A1] A centrifugal coupling is arranged between a drive member of a locking roller and a support arm to occupy disengaged or engaged position. The centrifugal coupling has a flyweight movable along the arm of drive member against a tension spring, and a connecting interface engaged inside the cylindrical rim of support arm to transmit elastic force of spring to flyweight. The device (10) has a body (16) having a movable security system (18) with the support arm articulated on a first spindle (24) of the body. The locking roller, consists of a cylindrical wheel, is mounted to rotate freely on a second spindle attached to the support arm.
