Abstract (en)

[origin: EP1525951A2] The tool is assembled of a handle (1a), a straight stationary jaw (5), and a movable jaw (6) with two inner contact surfaces (7, 8) arranged in order to be attached to a hexagonal or polygonal screw head. The movable jaw (6) has an outwardly curved extension (6c) positioned at its rear end to be used as a control lever against the forces of a spring (9) enveloping the bolt (2) serving as a rotation axle. The extension (6c) is pressed, the screw head inserted into the extended space and kept in position by the released jaw (6).
