Abstract (en)

Device and method for grinding a tubular fabric (11), wherein the device comprises a support and transport element (13) on which the tubular fabric (11) is positioned in order to be widened, supported and made to advance in a determinate direction. The device also comprises grinding elements (21) arranged around said support and transport element (13) which are brought into contact with the outer surface (11a) of the tubular fabric (11) positioned on the support and transport element (13), in order to perform a grinding action on the outer surface (11a) of the tubular fabric (11).
