Abstract (en)  
The invention relates to a concealed gutter, a sealing ring (10) therefor, a pipe segment (1) therefor and a spigot part (12) therefor. The concealed gutter comprises at least two pipe segments (1) and coupling means for connecting the pipe segments (1) to one another. Each pipe segment (1) has a pipe slit (3) extending over the entire longitudinal direction of the pipe segment (1), which pipe slit (3) opens on one side at the outer periphery of the pipe segment (1) and on the other side into a pipe chamber (2) running in the pipe segment (1). The coupling means are provided at at least one end of each pipe segment (1). According to the invention the coupling means comprise a socket part (9) and a spigot part (12) that can be accommodated in the socket part (9), wherein a pipe channel has been made in the spigot part (12), which pipe channel, when the pipe segments (1) are coupled together, extends between the pipe chambers (2) of said pipe segments (1). In particular, a sealing ring (10) is provided between the spigot part (12) and the socket part (9) to produce a seal between said two parts. There is a sealing flange (18,19) between the facing end faces of two connected pipe segments (1). The sealing flange (18,19) and the sealing ring (10) are in particular made from a flexible, rubbery material. The pipe segment (1) is in particular made from concrete.
