Abstract (en)

[origin: EP1526248A2] A winder (2) in a casing (1) winds up belting (3). A motor gearing mechanism (4) coupled to the winder drives the winder. A feeder channel (5), preferably with a deflection roller (6) fitted in it, feeds the belting into the casing. Sensors (7,8) emit switch-off signals for the motor gearing mechanism to correspond to preset positions for a black-out blind.
