Abstract (en)

[origin: EP1526608A2] The device has a base element (1) of flat material with high electrical conductivity, a conducting contact section (2), a box-shaped base section (4) and a connected flat plug pin (16) in one piece with the base section with two opposed pin sections and a holding element of sheet steel with a supporting edge (23). The holding element has a flat pin reinforcement section between the two pin sections, an intermediate section and a sprung angled holding section protruding via an opening (6) in the base section and forming the supporting edge.
