Abstract (en)

[origin: FR2843291A1] The device using surgical thread (11) consists of locking means (2) which enable two thread ends (31,32) of a suture to be joined at a locking area (42). A support element comprises a support surface (41) on the tissue to be sutured. There are controlled tension means (43) for the thread which can exert a tension according to a first predetermined value after the two ends of the thread have been locked.
