Abstract (en)  
[origin: EP1386626A1] The present invention relates to a delivery device suitable for treatment of diseases or conditions in which a drug has to be applied through the skin of a patient. Thus, a delivery device (1) is provided for delivering a liquid insulin-containing drug into the body of a patient, comprising a reservoir (40) having, in a situation of use, an outlet, an amount of a liquid insulin-containing drug contained in the reservoir (40) expelling means (33,41,52) for expelling the drug out the reservoir (40) through the outlet, and actuating means (20) for actuating the expelling means (33,41,52). In accordance with the invention, the expelling means (33,41,52) upon actuation is adapted for expelling the drug contained in the reservoir (40) during a period of maximum approximately 8 hours. <IMAGE>
