Abstract (en)

[origin: WO2004018815A1] The invention concerns a hinge part (100) for a door or window hinge or the like, comprising a frame-side hinge part and a leaf-side hinge part. Said hinge part (100) comprises: a fixing part (6) horizontally cantilevered laterally relative to the turning joint portion (3) of one of the hinge parts, said fixing part (6) being designed to fix the hinge part (100) to a front surface (2) of the fixed frame or of the leaf (1); a guide (9, 11, 10, 12) whereat the turning joint portion (3) can be displaced over the fixing part (6) horizontally and parallel to the frame plane; and an adjusting mechanism whereby the displacement can be carried out. The invention is characterized in that the fixing part (6) is urged into engagement from the rear with the turning joint portion (3) between the latter and the front surface (2) and in that the guide (9, 11, 10, 12) is located on the opposite external sides of the turning joint portion (3) and of the fixing part (6).
