Abstract (en)
[origin: WO2004013629A2] The invention relates to an assay for substances that modulate the activity of a polypeptide encoded human transient receptor potential 6 gene (TRPC6). The assay involves combining a candidate substrate substance with the polypeptide and measuring the effect of the candidate substance on the activity of said polypeptide. Such substances may be used in the preparation of pharmaceuticals for treating inflammatory diseases, particularly those associated with leukocytes.
