Abstract (en)
The invention pertains to an adjustable mitre device (4) comprising a centre arm (3) and a first (1) and a second side arm (2), pivotable with respect to each other and the centre arm (3). The centre arm (3) comprises at least one surface (3A) or edge for marking a measured angle on a workpiece, such as a wooden plank, beam or board, and least the upper or the lower surface of the first side arm (1) extends beyond respectively the upper or the lower surfaces of the second arm (2) and the centre arm (3), thus providing a side surface (1A) for alignment with the workpiece.
