Abstract (en)

[origin: WO2004013029A1] This elevator device comprises a cage moving up and down in a shaft, a balance weight moving up and down in the shaft in operative association with the cage, a rope hanging the cage and balance weight in the shaft, a wheel having the rope entrained therearound, a driving device for driving the rope to move the cage and balance weight up and down, an entrance preventing tool installed adjacent to an inlet/outlet port for the rope with respect to the wheel for preventing a falling object from entering from the inlet/outlet port for the rope into between the wheel and the rope, it being arranged that the entrance preventing tool attached to an attaching member is turned around a pivot with respect to the attaching member to adjust the distance between the front end of the entrance preventing tool and the rope.
