Abstract (en)

The present invention concerns a running track (1) on a lift for vehicles, including an end plate (2) at each end of the running track (1), and where an arrangement including one or more supports (4) and one or more holding means (5) is disposed under and in connection with the end plate (2), which end plate (2) is articulated about a first journal (3) to the end (6) of the running track (1), and where the arrangement in a first position is adapted to lock the end plate (2) at an angular position about the first journal (3) by the supports (4) engaging the holding means (5), and at a second position for allowing the end plate (2) to pivot freely about the first journal (3), where the supports (4) are mounted pivotably about a second journal (15) which is either disposed at an outer edge of the end plate (2) opposite the outer edge where the end plate (2) is pivotably connected to the end (6) or at an underside (22) of the end plate (2), where the end plate (2) is pivotably connected to the end (6), and by the holding means (5) being arranged on the end (6).
