Abstract (en)

[origin: EP1528035A2] The lift unit for an industrial truck, especially a high bay stacker, has hydraulic lift cylinders (6,7) for the extension of an extendable mast relative to a support mast and are installed parallel to one another on the left and right hand side of the lift unit. The two lift cylinders are charged with different hydraulic pressure, and are designed in such a way that the lift force required for the operating of the lift unit can be produced by one of the two cylinders.
