Abstract (en)

[origin: EP1528314A2] The device has a light source attaching a reflector near a saddle (104) and between locking tabs of the source and a zone of a bulb support opposite to an outer side of the reflector. A removable connection support (500) is fixed on the outer side, and has a set of counter parts for a connector to ensure an electrical connection with pads of the source in locked position, when the light source is locked on the reflector. An independent claim is also included for a motor vehicle having a headlight device.
