Abstract (en)

[origin: EP1528443A1] The timepiece has an energy storage device with two seconds wheels engaging with a main-spring and an escapement (8), respectively. An energy storage spring exerts a force on a yoke to separate a finger from a stop wheel. The main spring exerts a force on a setting wheel to press the finger against the stop wheel and allow the storage spring to transmit the energy exerted by the storage spring to the escapement.
