Abstract (en)

[origin: EP1389431A1] Method for operation of a cigarette manufacturing and packing machine that has at least one drive organ, especially a blower wheel, whereby the operating characteristics of the drive organ are measured and recorded. Recording is continuous or as triggered by a trigger event. An independent claim is made for a method for operating a blower wheel in a tobacco processing machine wherein a torque dependent and or a torque independent characterizing value for the wheel is measured, the difference between the measured and design values is determined, and the wear resulting from the difference is determined.
