Abstract (en)
[origin: WO2004024448A1] The invention relates to a printing machine comprising several printing groups (01, 02, 03, 04), at least one drier (09) and at least one folding apparatus (17,18). At least one printing group, in relation to the axial direction of the cylinders thereof, is arranged next to another printing group. The longitudinal direction of the drier (09) extends perpendicular to the axes of rotation of at least one cylinder group defining a printing gap.
