Abstract (en)

[origin: US2006006130A1] The invention relates to a sealing/pouring combination with security seal, comprising a sealing cap piece (1), for mounting on a pouring piece (2) with a through passage (3) and for sealing the through passage, whereby the sealing cap piece has a cap circumferential wall (6) and complementary engaging means provided on the sealing cap piece and the pouring piece which come into engagement with each other during the assembly of the sealing cap piece on the pouring piece. The above prevents a movement of the sealing cap piece in a direction against that of the assembly direction. The engaging means on the cap are provided on at least one circumferential wall region (11), recessed in the circumferential wall of the sealing cap piece, connected to the cap circumferential wall with at least a pair of webs (12, 13) in the region of the circumferential ends thereof, of which at least one is embodied as a tear-off web (12). The engaging means further comprise a planar projection (10), provided on the recessed circumferential wall region (11), which may be brought to engage under an engaging connection (7) on the pouring piece.
