Abstract (en)

[origin: WO2004013024A2] The invention relates to a method for preparing a winding reel (8) for a flying change of reels by applying an adhesive tape (44) between the beginning (30) of a web and a subjacent web layer of the winding reel, and a device for carrying out the inventive method. The invention further relates to a device for detecting a portion of a web of material, a system for detecting a portion of a web of material, and a method for detecting a web of material. Also disclosed are a device for applying a double-sided adhesive tape (44) to a surface, a system comprising such a device, and an method for applying a double-sided adhesive tape (44) to a surface.
