Abstract (en)
[origin: DE10236209A1] The combined fridge/freezer has an interior space enclosed by a thermally-insulating housing and divided into different storage compartments, at least one of which is closed by a hinged internal door flap (16), held in the closed position by snap-fit connection (25,26). The latter has a flexible deformable element (30) and a cooperating deformation element, e.g. a deformation pin (27), respectively associated with a wall section of the door flap and the thermally-insulating housing, or vice versa.
