Abstract (en)  
[origin: US2005254668A1] The invention relates to a loudspeaker arrangement inside a device for playing back stereophonic audio signals. The inventive loudspeaker arrangement consists of a housing located inside the device, a loudspeaker for bass signals, and of loudspeakers for mid-range and treble signals. Crossover networks divide the stereophonic audio signals for playback by the loudspeakers into bass signals, mid-range signals and treble signals. The crossover network have a crossover frequency that is higher than the cut-off frequency of the loudspeaker for bass signals.
