Abstract (en)  
The invention pertains to a container, in particular for a food product, such as a dairy product, comprising: a liquid-tight first reservoir (1) for containing a liquid first substance, which first reservoir is at least partly made out of coated cardboard, and which first reservoir is delimited by reservoir walls (16), at least one second reservoir (12) for containing a second substance, the second reservoir having a smaller volume than the first reservoir, the second reservoir comprising an interface (17) that attaches the second reservoir to a wall of the first reservoir, a barrier (13) associated with a respective second reservoir, which barrier can be eliminated to release the second substance into the first reservoir, openable closure means (15) that allow for opening and dispensing the contents from the first reservoir of the container. <??>The container according to the invention is characterised in that a reservoir wall of the first reservoir is provided with an aperture or a weakened area facilitating the formation of an aperture, and in that the second reservoir is attached to said reservoir wall of the first reservoir, covering said aperture or weakened area. <IMAGE>
