Abstract (en)
[origin: EP1530172A2] A distribution column for vending machines includes two side walls forming a substantially vertical chamber for containing products, such as cans or bottles, stacked internally for vending, the mutual distance of the walls being adjustable in order to vary the dimensions of the chamber according to the products to be contained. The distribution column has an adjusting and locking means for adjusting the mutual distance between the side walls and locking the plates in a position that corresponds to a selected distance.
