Abstract (en)

[origin: EP1530402A2] The aid has microphones (M1-Mn) for acquiring a set of input signals. A position determining unit (PB) e.g. head tracker, detects a position of the head of a user of the hearing aid using earth's magnetic field. A processing and separation unit (VE) identifies relative change in acoustic source positions based on the position of the head detected by the position determining unit. Independent claims are also included for the following: (A) a hearing aid system having a hearing aid (B) a method of adapting a hearing aid.
