Abstract (en)
[origin: WO2004017775A1] The invention relates to an item of clothing with a main closure device (13) and an additional closure device (31), whereby the main closure device (13) is embodied for the detachable connection of opposing edges (10, 12) of two pieces of the item of clothing made from material for the item of clothing and comprises two main closure sides which may be detachably connected together each of which is connected to one of the both edges (10, 12) of the item of clothing. At least one of the both main closure sides is connected to the corresponding edge of the item of clothing (10, 12) by means of a ventilation material (27, 29) forming a ventilation device, by means of which the interior of the item of clothing is accessible for ventilation air even with a closed main closure device (13). The additional closure device is embodied as a cover strip (31), which may be displaced relative to the main closure device (13), between a closed position, in which the above covers at least a part of the ventilation material (27, 29) and an open position in which the above exposes at least a part of the ventilation material (27, 29).
