Abstract (en)

[origin: US2006005726A1] A printing press has several plate cylinders on which printing plates can be placed and from which they can be removed. Changing of these printing plates is accomplished by remote control through the use of a central controller which is associated with the printing press. The central controller is in control of all of the units which are involved in the changing of the printing press. At least one printing plate on at least one of the plate cylinders can be changed while the press is in operation.
