Abstract (en)
[origin: WO2004022422A1] The invention relates among other things to a device for surfing or similar, in particular a surfboard, comprising a board-type body, which has a foam core (1) that is encapsulated by a laminate and an upper and lower face. According to the invention, at least the edge region of the front and/or rear longitudinal end and/or the left and/or right lateral edge of the board-type body, or optionally each of said regions, has at least two woven laminate layers (2, 3), at least one of which runs from the upper to the lower face, or vice versa, around the profile of the corresponding end.
