Abstract (en)
[origin: WO2004010762A2] An insect control system for controlling insects within a predetermined area (20). The system includes a plurality of insect control devices distributed throughout the predetermined area, the insect control devices including at least one device that emits an insect repellent (24) and at least one spaced apart device that emits an insect attractant (22a-22d). A sensor (26) senses at least one ambient condition and emits one or more corresponding signals to a central control device (30). The central control device (30) is arranged to respond to the corresponding signals and to emit activation signals which control the operation of the insect control devices according to the corresponding signals.
