Abstract (en)

[origin: WO2004016849A1] A method of dyeing or printing cellulose-containing fibre materials using disperse dyes that comprises treating the fibre material with an aqueous composition comprising a watersoluble or water-dispersible polyester resin and a water-soluble or water-dispersible acrylate binder produces level dyeings and prints having good allround fastness properties and is advantageously suitable for cellulose-containing fibre blends, for example blends consisting of polyester and cellulose.
