Abstract (en)
[origin: WO2004022852A1] Disclosed is a track for magnetically levitated trains, comprising travelway plates (3) which are made of steel, are inserted in a laterally overlapping manner onto a supporting framework (1), and are provided with longitudinal support members (4) and transverse support members (5), and lateral guiding rails (7) that are connected to a covering metal sheet (5). Stator supports are fastened underneath the two outer longitudinal support members. The travelway plates rest on the supporting framework via spring bearings (10) which are connected in a fixed manner to said travelway plates and the supporting framework, and an optional fixed bearing (10).
