Abstract (en)

[origin: WO2004018818A1] The invention concerns a motor vehicle comprising a device (1) for controlling the shifting movement of a closure element by means of a shifting mechanism (5) fixed on said closure element. A transmission element (11) is mounted on a support console (7) fixedly connected to the closure element. Said transmission element (11) is mobile relative to said support console (7), mounted mobile over a body zone via a bearing zone (13, 15) and coupled to the shifting mechanism (5) via a coupling zone (18) opposite the bearing zone (13, 15) to enable mechanical force transmission.
