Abstract (en)  
A brush tufting machine includes a machine tool table having a slide that is displaceably guided on the machine tool table in at least two mutually orthogonal directions. A first drive is provided for reciprocating the slide in a first one of the two directions, and a second drive is provided for reciprocating the slide in a second one of the two directions. Two drums are mounted at the slide for rotation about parallel, spaced axes. Two tufting tools are arranged at the machine tool table at a distance from each other and each in opposition to a peripheral surface of one of the drums. The peripheral surface of each drum has brush body holders arranged thereon.
