Abstract (en)  
[origin: EP1530934A1] A multi-layered bed duvet has a heat-insulating hydrophilic filling (10) sandwiched between two first textile layers (11, 12) and held within one or more sewn compartments. The textile layers (11, 12) have capillary passages, are relatively hydrophobic and allow the passage and escape of water vapour. The first textile layers (11, 12) have a second textile cover (13, 14) which is very hydrophilic in comparison with the first and is water vapor permeable. The time taken by the first textile (11, 12) to absorb a water droplet is twice required by the second textile (13, 14). The individual layers are linked by sewing seams, buttons, hook and loop fasteners, sliding clasp fasteners. Alternatively the second textile layer forms a bag cover into which the first layers (11, 12) and filling material (10) are inserted.
