Abstract (en)

The blade forms a fixed V articulated on a support. The angle of opening of the V is defined along with the angle of orientation of the blade to the left or right to allow side evacuation of snow while retaining surface of the support on the blade. The blade has a fixed flap, and two lateral articulated flaps (6, 6') retracted by a retraction mechanism that are supported against a frame supported by the support.

Abstract (fr)

Cette lame permet, par son orientation, de cumuler les avantages d'une lame droite et d'une lame en V. Elle est adaptable sur tout véhicule ou engin, aptes à en supporter les efforts mécaniques. <IMAGE>
