Abstract (en)
[origin: WO2004013390A1] The invention relates to a method and device for processing fibre material, whereby said device comprises at least one non-woven material laying device (3), to which a non-woven material web (8), formed from fibres, is supplied by a non-woven material generator. A drawing device for the non-woven material web (8) is arranged to the inlet side before the non-woven material laying device (3), whereby the variable speed of the non-woven material web generated therein is compensated for in an integrated buffer device (4) in the fleece laying device (3). The buffering occurs in a strip section (28) in the feed section of the upper carriage (11) and in the region between the upper carriage (11) and the laying carriage (12) of the non-woven material laying device (3).
