Abstract (en)

[origin: WO2004025033A1] A damn structure for liquids and bulk material, comprising two rows of pressure pallets (1), which are arranged in such a way that they are placed against each other and inclined in an offset manner, and support pallets (2) and a sealing film (3) disposed on the pressure side of the pressure pallets (1). The pressure pallets (1) and the support pallets (2) are respectively connected to each other by means of traction-pressure tie elements (11) forming a static assembly. The lower edges of the pressure pallets (1) and the support pallets (2) can be received in a positive fit by pressure-sided and support-sided groove profiles (7,8) which respectively extend through several pallets (1,2) and are connected to each other by means of the traction-pressure tie elements (11).
