Abstract (en)  
[origin: EP1532886A1] A slider (1) for a slide fastener comprises a slider body (2) having a mounting hole (13) formed therethrough; an attaching pole (4) having a pin hole (21) formed at the upper end to extend laterally therethrough. The attaching pole (4) is upwardly inserted through the mounting hole (13) with its pin hole (21) lying beyond the upper surface of the slider body (2). A pull tab (3) has two attachment lugs (25) formed at its proximal end and provided with their respective pin apertures (26). A pin (5) is inserted into the pin hole (21) of the attaching pole (4) and the pin apertures (25) of the pull tab (3), so that the pull tab (3) is pivotally mounted on the attaching pole (4). The slider (1) may have a shock-absorbing member (50) made of soft materials and mounted on the pull tab (3) at the region where the pull tab (3) contacts the slider body (2) in order to prevent the pull tab (3) from causing rattling noises. <IMAGE>
