Abstract (en)
A bending machine (1) for tubular elements (T) comprising a base (2) that supports a bending head (5) in which there is a support structure (6) associated with: a bending female die (7), a bending male die (8) opposing the bending female die (7), guide means (10) of the tubular element (T) to be bent and power means (11) to set the bending female die (7) rotating. The guide means (10) belong to a support plate (12) resting on an underlying support counterplate (13) coupled to the support structure (6) through sliding means (14) and associated with shifting means (15) suited to shift it along the shifting direction (Y) defined by the sliding means (14) in order to position the guide means (10) on the right side (D) or on the left side (S) of the female die (7) and of the longitudinal axis (X) of the tubular element (T). <IMAGE>
