Abstract (en)
The c-shaped handle (2) can be swiveled around an axle located at the lower segment (2a) in order to insert a vibration absorbing rubber element (11) assembled of a front and a rear segment (11a, 11b) which can be of different levels of rigidity. A flat metal part (6) with hook shaped ends (8, 9) is accommodated inside the rubber elements (11a, 11b) and is stationary joined to the housing (1) of the tool. The hooks (8, 9) engage with matching spaces located at the upper handle segment (2b) when the handle (2) is swiveled into a position ready for use.
