Abstract (en)
[origin: EP1533585A2] The plate has an outer casing, and partitions separating a volume defined by the casing into channels for flow of fluids. The casing has flat regions (2), where the flat regions and the channels extend in a same longitudinal direction. The flat regions and the casing are provided in a notch (10) in a longitudinal direction by opening one channel that extends till the flat regions. An independent claim is also included for a heat exchanger having several plates.
